Modern AI Ecosystem

From Foundation Models to Open Source & MCP

Practical AI Utility

Primary domains driving enterprise value.

Creative & Content

Multimodal generative capabilities.

Productivity Integration

Autonomous **agents** driving workflows.

Enterprise Search

Contextual **RAG** knowledge retrieval.

Real-time Decisions

Predictive data **analytics**.

Democratizing Intelligence

Proprietary APIs

- Opaque model weights.
- External cloud dependency.
- Strict data exposure.

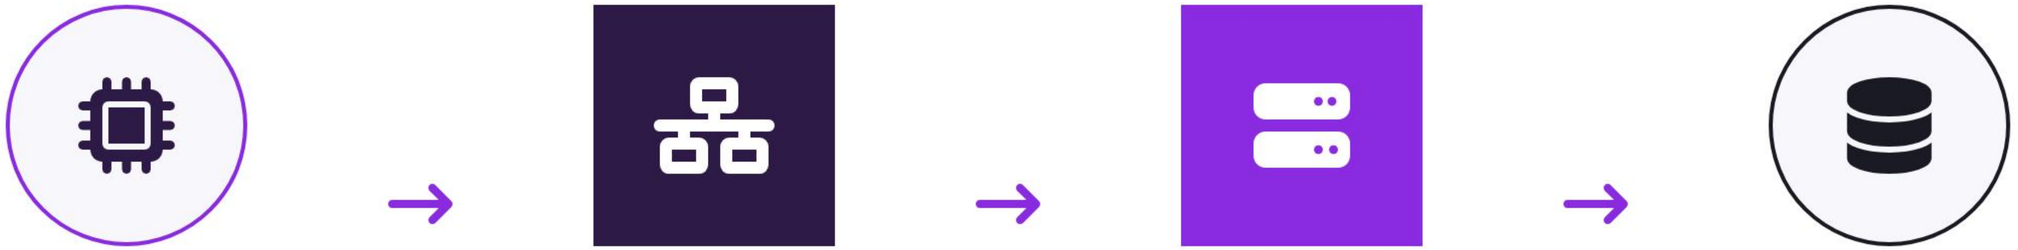

Open-Source Models

- Total **Privacy**.
- Deep **Customization**.
- Local deployment via Ollama.

LLAMA | MISTRAL | QWEN | DEEPSEEK

Model Context Protocol (MCP)

Seamless tool calling and data integration architecture.

Host Model

Claude / Gemini

MCP Client

Protocol handler.

MCP Server

Secure bridge.

Local Resources

GitHub / Postgres

Core AI Mechanics

01

Base Model

Core **inference** engine.

02

Context Layer

Embeddings and MCP retrieval.

03

Execution

Autonomous **function calling**.

Open models give ownership.
MCP gives context.

Together they build autonomous workflows.
